Acoustic control has become an increasingly important issue. Whether in the private, public or professional sector, the modern work environment can require the separation of different work spaces or the creation of enclosed meeting areas. Our Sound Curtain OFFICE combines the effectiveness, flexibility, aesthetics and design to meet the challenges and demands of modern work spaces.

For use in both small and large windows, we offer ABSORBER LIGHT – a uniquely developed translucent and highly absorbent semi-sheer fabric which utilises thousands of micro perforations. ABSORBER LIGHT has an exceptional absorption level that reduces reverberation times, ensuring optimal speech intelligibility and, at the same time, adds a degree of warmth to a room.

When both excellent sound absorption and room darkening are required, ABSORBER CS is the perfect choice.

Gerriets acoustic solutions have won a number of distinguished awards including the "ARCHITECTURE + OFFICE 2016 Innovation Award".

GERRIETS ACOUSTICS – We have the right solution for any space!
Optimal support during the planning phase

Room acoustics are complex. Having reliable measurement data and technical support throughout construction are key. All measurement data provided by Gerriets Acoustics originates from well-known testing laboratories, and all fabrics have been measured and certified under neutral conditions. Professional consultation during construction and measurements on site can be carried out by Gerriets’ in-house acousticians—so every project will be a success!

Perfect room acoustics: additional benefit for every room

Noise pollution is a large disruptive factor, especially in daily office life. Technically, noise is defined as unwanted sound which affects health, decreases performance levels and impairs communication. Taking these factors into consideration, room acoustics should be part of every planning process to reduce stress levels and counteract long-term illnesses of employees. Well-suited acoustic design can improve speech intelligibility as well as lower noise levels, therefore reducing overall stress levels.
Reducing the noise level in offices

Unlike in machine shops or workshops, noise levels in offices normally aren’t harmful to the human ear. However, permanent disruptive noise can adversely affect both body and mind. Stress hormone levels, blood pressure and heart rate clearly increase when exposed to noise. Therefore, a workplace ordinance was established in Germany which states that noise pollution should be minimised at office workstations to improve speech intelligibility and concentration. 1)

Frequency of errors in the work of administrative staff depending on the noise level 2) 3)

Performance efficiency (Return/time required) for processing of administrative tasks depending on the noise level 2) 3)

1) German workplace ordinance from August 12th, 2004 (BGBl. I s. 2179), last amended by article 1 V from November 13th, 2016 I 2681.
"Touch and Divide." With the assistance of our Sound Curtain OFFICE, separate rooms and workspaces can be created at the push of a button. Numerous options are available ranging from 3 to 7 layer curtains with varying degrees of sound transmission as well as a number of fabrics and colour options ranging from solids to patterns, even custom printing. Choice of manual or fully automated operation is available. All Sound Curtain OFFICE systems are expertly tailored to your individual requirements.
Our Sound Curtain OFFICE is available in three standard versions: 3, 5, and 7 layers (individual sound certificates available). To increase the sound absorption and reduce the sound transmission of the standard versions, additional layers of fabric can be added later.

For the outside layers of the curtain, we offer several fabric choices. Our stage velvet ALICANTE and WOOLSERGE OFFICE are two of the most popular fabrics. Stage velvet ALICANTE is made from Trevira CS which is inherently flame retardant, sound absorbent, odourless and washable. WOOLSERGE OFFICE, available in several colours, is a popular choice in office environments as it offers a modern clean appearance with the added benefit of excellent sound absorbency. For a more custom look or art inspired curtain, a variety of other Sound Curtain fabrics suitable for digital printing are available. The outer layers are typically made with an extra 5-10% of fullness to produce a visual undulation we call “wave optic.” Not only does the wave optic add to its aesthetic appeal, it also enhances sound absorbency of the curtain.

The inner layers consist of inherently flame retardant, sound absorbent, odourless and washable materials.

Our Sound Curtain OFFICE is used in conjunction with our TRUMPF 95 OFFICE track system. It can be operated manually or automatically (see p. 41).

**Advantages of the System**

- Effective and flexible
- Separation of work areas
- Conference islands
- Think tanks
- Quiet zones
- Sound isolation up to 26 dB
- 3-7 layered design
- Number of layers can be increased
- Sound certificates available
- Flame retardant
- Custom designed outer layer according to client requirements
- Automated if required
- Remote control available
Sound reduction factor according to test certificate:

- 3 layer version up to ~11 dB.
- 5 layer version up to ~13 dB.
- 7 layer version up to ~16 dB.
- 12 layer version up to ~26 dB.*

Fabrication method:

**3 layer version:**
Front side with wave optic.
Middle layer: 1 x sound reflecting.
Back side with wave optic.

**5 layer version:**
Front side with wave optic.
Middle layer:
2 x sound absorbing, 1 x sound reflecting.
Back side with wave optic.

**7 layer version:**
Front side with wave optic.
Middle layer:
3 x sound absorbing, 2 x sound reflecting.
Back side with wave optic.

**Additional layers upon request:**
To increase the sound absorbency, additional middle layers can be added. For example, a 12-layer Sound Curtain achieves an on-site measured sound reduction of 26 dB (see p. 32 for more details).

*On-site measured
With the help of the innovative Sound Curtain OFFICE, a versatile utilisation of rooms is possible. Conference islands, quiet zones, think tanks and separated work areas – the applications are limited only to your imagination!
Ottobock HealthCare

Description
• Visual and acoustic separation of conference rooms.
• Manufacture and installation of two 7-layer Sound Curtain OFFICE drapes with wave optic. Additionally, three single layer privacy curtains were made to match the outer layer of the Sound Curtains for other conference rooms.
• Outer layers of Sound Curtains OFFICE and privacy curtains were made from WOOLSERGE OFFICE custom dyed in brown-grey.
• Installed on a combination of TRUMPF and suspended TRUMPF 95 OFFICE walk along track systems.

Kabelwerke Brugg AG

Description
- Flexible separation and acoustic optimisation of training rooms.
- Manufacture and installation of two 3-layer Sound Curtain OFFICE drapes with wave optic; can be set at a variety of different positions.
- Outer layer custom designed to client requirements.
- Installed on TRUMPF 95 OFFICE track system with FRICTION DRIVE; mounted within the air conditioning system in the ceiling.

The TRUMPF 95 OFFICE track system is specifically created for use with Sound Curtain OFFICE drapes. Its small profile, elegant design, and smooth operation are the perfect complement to the curtain system.
The Sound Curtain OFFICE can be operated by hand or motorised with the virtually silent FRICITION-DRIVE motor. Continuous loop systems, remote control and integration into third-party automation systems are possible.

For a curtain which acoustically improves, darkens and optically enhances your room, the award winning and highly absorbent fabric ABSORBER CS is the right choice. This material was developed in cooperation with musicians, theatre consultants, and an acoustic testing institute to efficiently absorb sound.
Its exceptionally high density and weight of approx. 560 g/m² (16.51 oz/yd²) earned ABSORBER CS a class C acoustic absorption rating, which distinguishes this fabric as highly sound absorbent. The heavy fabric is extremely robust and stable, yet hangs soft and drapes beautifully.

ABSORBER CS is an inherently flame retardant alternative to classic wool fabrics and is recommended for rooms that need to be acoustically optimised and darkened.

ABSORBER CS has been acoustically tested in four standard applications (see next page). Customised options are available upon request.

### Material Description

- 100 % Trevira CS.
- Inherently flame retardant.
- Flame retardant standards: DIN 4102 B1, M1, DIN EN 13501-1, NFPA 701.
- Colour: black.
- Minimum quantity for custom dyed colours approx. 200 rm (220 yds).
- Width: 180 cm (71 in).
- Weight: 560 g/m² (16.51 oz/yd²).

- Piece lengths approx. 40 and 50 rm (43 and 54 yds).
- Acoustic absorption values per certificate according to DIN EN ISO 354: $\alpha_w = 0.65-0.90$.
- Acoustic absorption class: A-C.
- Flow resistance according to DIN EN 29053: $R_s = \text{approx. } 1.380 \text{ Pa s/m}$.
Acoustic absorption as measured in reverberation chamber

Application 1
• Evenly hung flat panel with no fullness.
• Mode of installation: G-100 according DIN EN ISO 354.
• Distance from wall: 100 mm (4 in).
Acoustic absorption value: $\alpha_w = 0.65$
Acoustic absorption class: C

Application 2
• Evenly hung flat panel with no fullness.
• Mode of installation G-290 according DIN EN ISO 354.
• Distance from wall: 290 mm (12 in).
Acoustic absorption value: $\alpha_w = 0.75$
Acoustic absorption class: C

Application 3
• Evenly hung panel with 100% fullness.
• Mode of installation: G-100 according DIN EN ISO 354.
• Distance from wall: 100 mm (4 in).
Acoustic absorption value: $\alpha_w = 0.85$
Acoustic absorption class: B

Application 4
• Evenly hung double-sided flat panel, each with no fullness.
• Distance from wall: 100 mm (12 in).
Acoustic absorption value: $\alpha_w = 0.90$
Acoustic absorption class: A
ABSORBER CS is ideal for any large multi-functional space or auditorium with variable acoustic requirements. Other applications for which it is well-suited include conference rooms, sound studios, exhibit halls, restaurants, large atriums and any other space requiring sound reduction.
Kulturzentrum für Europäische Weltraumtechnologien

Description
• The lower hall used to stage cultural events provided quite a challenge due to the varied heights of walls within the space. Curtains and tracks were used to improve both the visual and acoustic properties of the hall.
• Manufacture and installation of an ABSORBER CS curtain; in black; approx. 21.00 m (69 ft) wide x 3.30-6.60 m (11-22 ft) high.
• Installed on TRUMPF 95 track system.

[ABSORBER LIGHT]

Achieving high quality acoustics in a naturally lit environment has posed a challenge throughout the years – until now. This award winning, innovative, semi-sheer translucent fabric allows bright, naturally lit rooms to coexist with perfect acoustics.
Most acoustically absorbent fabrics are thick, heavy and room-darkening. Our ABSORBER LIGHT is different. The translucent yet highly absorbent fabric uses thousands of micro perforations within the weave to absorb sound. On the market, it currently has the best absorption class in the field of translucent acoustic textiles. ABSORBER LIGHT combines three elements that no other fabric has achieved thus far: a visually appealing design, brightly lit rooms and perfect acoustics.

At a width of 3.0 m (118 in) this acoustic fabric can be used to manufacture seamless drapery for office environments at average ceiling height. Besides our standard colours – light beige, sand brown, anthracite, grey silver and white – custom dyed colours are available upon request.

Tested in two standard applications (see next page). Customised applications available upon request.

**Material description**

- 90 % Trevira CS, 10 % Polyester.
- Flame retardant standards: DIN 4102 B1, M1, DIN EN 13501-1, DIN EN 13773, NFPA 701.
- Colours: sandbrown, light beige, anthracite, grey silver & white.
- Minimum quantity for custom dyed colours approx. 120 rm (130 yds).
- Width: 300 cm (118 in).
- Weight: 149 g/m² (4.39 oz/yd²).
- Piece lengths approx. 30 rm (32 yds).
- Acoustic absorption values per certificate according to DIN EN ISO 354: \( \alpha_w = 0.80 \) with 100 % fullness and 150 mm (6 in) distance to wall.
- Acoustic absorption class: B.
Acoustic absorption as measured in reverberation chamber

**Application 1**
- Evenly hung flat panel with no fullness.
- Mode of installation: G-150 according DIN EN ISO 354.
- Distance from wall: 150 mm (6 in).
Acoustic absorption value: $\alpha_w = 0.55$
Acoustic absorption class: D

**Application 2**
- Evenly hung panel with 100% fullness.
- Mode of installation: G-150 according DIN EN ISO 354.
- Distance from wall: 150 mm (6 in).
Acoustic absorption value: $\alpha_w = 0.80$
Acoustic absorption class: B
Our ABSORBER LIGHT fabric can be used in many ways. Whether in art galleries, museums, lobbies, offices or rehearsal rooms, with the help of our ABSORBER LIGHT you can create a modern, open and comfortable atmosphere.
Clark Music Center Lawrenceville School

Description
- Replacement of previous semi-sheer curtains in two recital halls to create an acoustically optimised space while maintaining the sunlit nature of the rooms.
- Manufacture and installation of 16 ABSORBER LIGHT curtains in light beige with 100% fullness to create maximum sound absorbency.
- Installed on eight TRUMPF manual bi-part track systems.

Client
The Lawrenceville School

Location
Lawrenceville, NJ / USA
Holzmarkt 1

Description
• Curtains for the foyer of a new office building, which serve as a design element and create an acoustically optimised and modern atmosphere.
• Manufacture and installation of two curtains made from ABSORBER LIGHT in anthracite.
• Installed on two ELEGANCE track systems with FRICTION-DRIVE.

Client
Mathes GmbH

Location
Cologne / Germany
Open Systems AG

Description

- Project study: Open space-in-space concept which is acoustically optimised and allows a panoramic view of the Alps.
- Manufacture and installation of 90 m² (970 ft²) of ABSORBER LIGHT in white as wall covering for the interior.
- Manufacture and installation of 100 m² (1075 ft²) of bleached muslin SHIRTING; in white; as ceiling of the test set-up.

Gerriets is an expanding company with subsidiaries, distributors and sales partners in more than 20 countries. Since its founding in 1946, Gerriets has developed into a global leader in the fields of stage technology, large scale events and acoustic projects. Today, this third generation family business continues to respond to the demands of the market.

Due to our extensive experience in the theatre and event industries, we began receiving inquiries from the architectural field. As a result, Gerriets designs, develops and manufactures its own line of architectural products and is now available to you as a trusted partner to deliver professional quality acoustic solutions.

GERRIETS ACOUSTICS – We have the right solution for any space!
